### ***Optimize the potential of your biological material - secure a future on the global market***

Your company's biological material is a priceless treasure. It is a great source of knowledge and evidence for your research, both today and in the future.

Using the material as an asset over time is a prerequisite for a safe and fast route to the global market.

### ***NordicBiocube provides simple quality solutions***

NordicBiocube has the knowledge and experience from the entire process, from small-scale to large and long-term projects.

Therefore, we know how important it is that the right things are done properly and on time. Our unique expertise and experience will help you to maintain chain of custody, secure investments, global partnerships and opportunities to successfully reach the market.

## Choose the entire Biocube... or one of our services

### Process Consultancy

*Cost-efficient process for biological materials,  
local as well as global*

Our guiding principle is to take advantage of your company's ideas and add our unique expertise. We have a strategic approach where we take into account how you work with your biological material today and how you will work with it tomorrow.

To assure optimal use and full chain of custody for the material we also provide customized LIMS systems and IT-solutions.

### Project Management

*Makes your biological sample last far longer than your latest study or project*

NordicBiocube creates an individual study process for the biological material your company owns which fulfills QA and authorities' demands. Your company's biological material can then be used in the most optimal way a long time after your clinical studies or projects are finished.

### Laws & regulations affecting biological material

#### *Training and seminars*

We offer both open and **internal** training and seminars in current laws and regulations for biological material.

### Labels

#### *Specific requirements for labels on biological material*

We provide high quality-labeling which meets your information requirements, both regarding durability and readability.

All labels are thoroughly tested in various environments.

We help you to find the best solution for each specific situation.

### Lab kits

#### *Lab kit specifically designed for your study*

Study specific lab kits facilitating for the site personnel to secure safe handling of samples.

### Valuable transports

#### *Transport allows no room for compromises.*

We offer high quality transports according to current regulations.

Owners of biological material are obligated to ensure that the involved companies comply with the applicable requirements. We take care of all communication and logistics for you.

### Safe storage

#### *Biological material must be stored in a safe and trustful way*

We offer safe storage of biological material and corresponding processes, documentation, logistics and service. All in accordance with applicable laws and regulations.
